The Power of Reporting With ShipHero

With data at your fingertips, ShipHero shipping software puts the ability to plan and optimize just a few clicks away.

At ShipHero, we're pretty hard core about a few things. One, superheroes are cool. Two, customer service should always be exceptional. And three, giving customers the power to pull their own data, chart their own path and find their own strengths and weaknesses is the only way to operate.

REPORTING

shiphero™

Pick Your Planning Tool

ShipHero has robust reporting features that offer clients the chance to truly pull the data important to them and their bottom line.
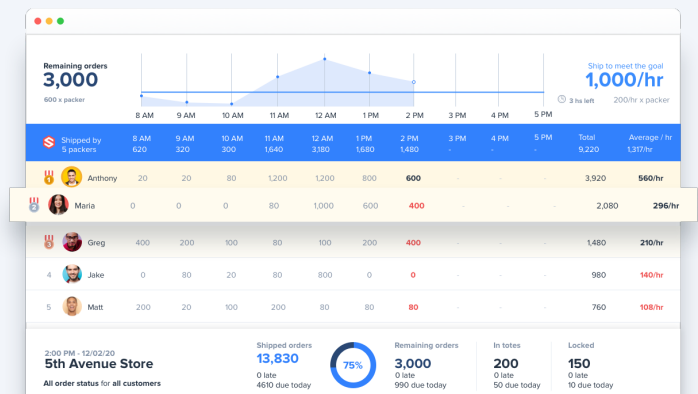

Standard reports included in ShipHero's Shipping Software are:

- Shipments
- Picker/Packer Efficiency
- Live Shipping Board (Display on monitors in the warehouse to encourage friendly competition)
- Cost of Goods

- Sales by SKU
- Shipped Items
- Inventory Value
- Inventory Replenishment
- Stale Inventory

Also, with ShipHero's **Open API**, your IT team has the power to pull all of the data ShipHero's system generates for your business and manipulate it as you need. This data can be pulled as a CSV so that it can be used across other programs within your organization.

Build Reports Especially for Your Business

By choosing the most important data to you and your teams from the dropdown menus, you'll have valuable information right in front of you, whenever you need it.

Custom Reporting - One of ShipHero's Superpowers

In spite of all the built-in reports available to ShipHero clients, it's possible that some clients might be looking for reporting with more customization.

ShipHero's Client Support Managers can build and run custom reports for clients on a regular basis, delivering these reports directly to their inboxes. Reports like:

• **Automation Rule Execution Report**
A daily report showing which orders triggered a specific automation rule.

• **Location Usage Report**
A custom report showing when and where your current items are and what space might be available.

This on demand reporting capability is an add-on that comes with a nominal charge of $200/month for the first report and an additional charge of $15/$30 per report for each additional report, depending on complexity.

Custom reports are sent via email and exported as a CSV so that it's easy to extract and compare the data across company goals.

Put the Power in Your Hands Today with ShipHero Reporting

Current ShipHero clients, please reach out to your CSM for any questions regarding reporting capabilities. You can also view reporting help desk articles in the Knowledge Base **HERE.**

New to ShipHero? If you're ready to see how ShipHero can provide you with an end-to-end shipping and order management solution, plus the reporting capabilities you need to be successful, please reach out to one of our software experts today.
